

# The GDPR and Engaging Networks

The General Data Protection Regulation (GDPR) was introduced to strengthen and unify data protection within the UK and European Union. It became enforceable on 25 May 2018 and organisations that collect and use personal data will need to be aware of its principles and ensure they are compliant with

**This document lists the features of Engaging Networks and how they can be used to tackle various requirements of GDPR.**

Please note that there are other requirements of GDPR not referenced here since they are not related to the use of a digital engagement platform like Engaging Networks.

## *engaging* NETWORKS

Revision	Date	Description
1.2	08-Sep-2022	Document revised to add information on AWS, data encryption and data deletion
1.1	02-Mar-2020	Document revised to take into account existing platform updates and upcoming new profile filters
Original 1.0	06-Feb-2018	Initial document. Includes information on upcoming platform updates

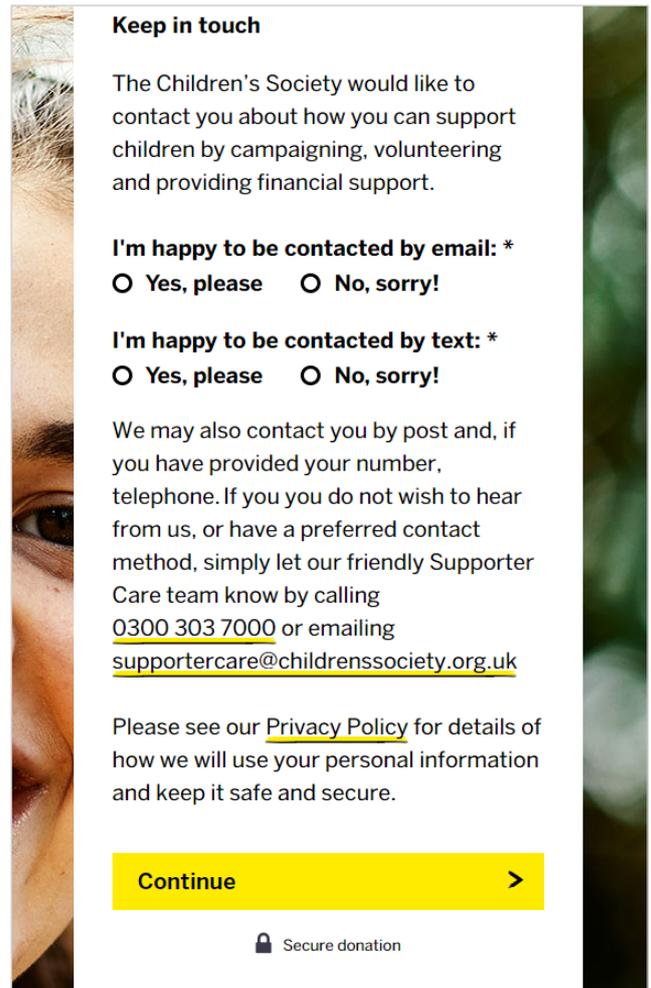

# Opt-ins

Consent is managed in Engaging Networks using opt-ins. Opt-ins are “questions” that track a supporter’s response to an on-screen statement as either Yes (Y) or No (N). The statement can be placed on any Engaging Networks page as a checkbox or radio buttons. It is also tied into your email campaigns’ unsubscribe links.

When someone submits a page or changes their subscription status, the value of the opt-in is recorded as a transaction, which is a row of data which includes where and when they submitted their response. This means you build up an exportable audit log of a supporter’s consent status and have proof of consent. This historical data is also viewable within each supporter record within the Transaction History gadget as QCB rows.

The Children's Society have multiple opt-ins and include a link to a privacy statement

In addition, a log of changes to opt-in labels are displayed, so you can more easily relate a supporter’s consent to the statement they signed up to.

New profile filters allow you to more easily select when a supporter last opted In, so you'll know which supporters need reconfirmation.

## Why is this important for GDPR?

One key component of GDPR is the Lawful basis for processing: Consent. In particular, you must “Keep evidence of consent – who, when, how, and what you told people”. The design of our opt-in functionality means you are keeping an audit log of consent that you can export at any time.

## Multiple opt-ins

You can have as many opt-ins as you need, each with different statements, and include as many or as few as required per page. In addition, our 'locale' feature means you can use the same opt-in to record different statements in different languages depending on the supporter's preference.

### Why is this important for GDPR?

You are advised to "Be specific and 'granular' so that you get separate consent for separate supporter activities. Vague or blanket consent is not enough." You can create your opt-ins to make each specific to channel or content, thereby collecting separate consent for separate activities.

## Opt-in account settings

There are several account-wide settings that allow you to fine-tune what happens when an opted-in supporter chooses "No" on a page's opt-in question.

You also have the option to hide opt-in questions entirely for supporters that are already opted-in. By doing this, subscribed supporters are less likely to opt out when submitting a page.

### Why is this important for GDPR?

Ensuring you do not lose supporters as a result of tightening your opt-in procedures in response to GDPR and Consent is vital. These tools, and ones in development in response to client discussions, will help ensure this.

## Opt-in question settings

You have many different options for your individual opt-in questions to ensure they meet your needs. As mentioned previously, you can either show them as a checkbox or as a pair of radio buttons. In addition, you can add an extra step so that your supporters have to confirm that they wish to opt-in via an email link.

Engaging Networks' opt-in manager offers several settings

Name	Email opt-in
Type	Opt in
Label	Join the mailing list
Field type	Radio
Default content	
Mandatory	<input checked="" type="checkbox"/>

### Why is this important for GDPR?

GDPR says that "Consent requires a positive opt-in. Don't use pre-ticked boxes or any other method of default consent.". Further GDPR states "Avoid making consent to processing a precondition of a service.". If you are using a checkbox for your opt-in, uncheck the "pre-tick" option so it will display unchecked on a page. If you use a radio HTML format for your opt-in, then you do not have to have any of the two options pre-selected. Making this question mandatory will mean the supporter is prompted to choose an option, but do not have to choose Yes to continue.

## Shared components

Opt-in questions are shared components, which means if you amend the opt-in label in one campaign, it will change it for any other campaign using the opt-in. They have two editable labels - one above the checkbox, or radio buttons, and also a label next to the opt-in field itself called the Default Content. You can manage these via the manage opt-ins button in form blocks.

But it's not just opt-ins that can be shared components. You can place a text block on your page to contain your privacy policy, or include the statement in your templates. This means that should you need to update a policy you don't need to worry about changing it in more than one place.

The NSPCC's opt-in text blocks are shared components

*If as an existing supporter you already hear from us, we will continue to contact you in the ways that we have in the past but you can change the way we contact you at any time. If you wish to do this please call our Supporter Care team on 020 7825 2505 or email [supportercare@nspcc.org.uk](mailto:supportercare@nspcc.org.uk)*

*We will never pass on your details to any other organisations to use for their own purposes. You can find out about how we use and look after your data at [nspcc.org.uk/privacy-policy](https://nspcc.org.uk/privacy-policy).*

Would you like to hear from us by email?

Yes  No

**What matters to you?**

Help us understand what's most important to you, so we can tailor some of your emails to what matters most to you.

Please select one

**You're in control**

Whatever you choose we won't send you more emails – just better ones! We'll still let you know how you're making a difference as well as sending you content that we think you'll like.

### Why is this important for GDPR?

For **Lawful basis for processing: Consent**, you should “Check your consent practices and your existing consents. Refresh your consents if they don't meet the GDPR standard.” Shared components ensure your changes are immediately applied to all your live pages and can be used to display information and cover the GDPR's **Right to be informed**.

## The Hub

The Hub allows your supporters to manage their constituent data at any time. This technology uses an email challenge and response login system, and offers separate gadgets to display to the supporter their stored data values such as their address or phone number, as well as their subscription status (opt-in responses). A link for supporters to access The Hub can be added to your website, or email communication.

Additional gadgets can be added to encourage your supporters to increase a monthly donation, or find out how the campaigns they have taken part in are progressing.

Manage your subscriptions gadget in The Hub

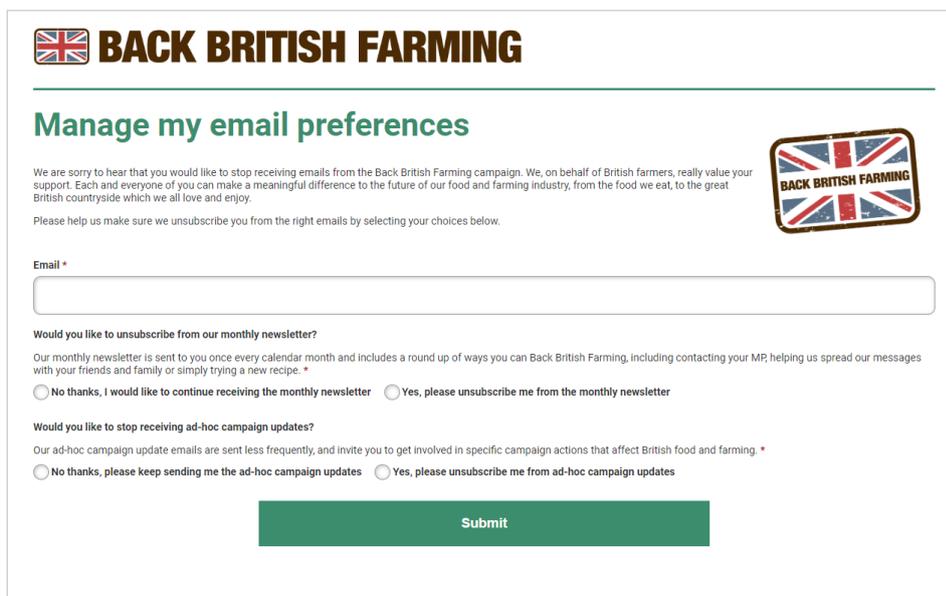

### Why is this important for GDPR?

This covers many aspects of the GDPR. One requirement, as discussed earlier, requires you to have active consent for communication, and “the right to withdraw consent at any time, where relevant”. As a self-management tool, supporters can opt-in or opt-out using The Hub. As part of their **right to rectification** supporters can amend their personal data and as part of their **right to access** to see what data you hold.

## Unsubscribe links and pages

It is a simple process to add unsubscribe links to your email campaigns, or to a template, so that every email campaign you send includes these links by default. Unsubscribe links work in several ways:

- a 'one-click' unsubscribe link, where a supporter clicks to immediately set the opt-in question to an 'N' value, displaying a confirmation page to the supporter
- a special subscription management page, showing the supporter their current status of selected opt-in questions so they can manage them, or give reasons for leaving
- a native unsubscribe link offered by the email provider with their own platform, e.g. Gmail

The screenshot shows a form titled 'Manage my email preferences' for 'BACK BRITISH FARMING'. It includes a header with the organization's name and a Union Jack logo. Below the title is a paragraph of text explaining the purpose of the form and a small 'BACK BRITISH FARMING' logo. There is an 'Email' input field. Two questions are asked: 'Would you like to unsubscribe from our monthly newsletter?' and 'Would you like to stop receiving ad-hoc campaign updates?'. Each question has two radio button options: 'No thanks, I would like to continue receiving...' and 'Yes, please unsubscribe me from...'. A green 'Submit' button is at the bottom.

National Farmers Union have an unsubscribe landing page that allow you to manage the kinds of messages you receive

### Why is this important for GDPR?

As part of **consent**, you need to “make it easy for people to withdraw consent and tell them how”. Email templates will ensure there is always an easy way to unsubscribe, and you can present other methods to withdraw consent in email and page templates.

## Email to target

Email to target campaigns allow your supporters to email messages to a target, or targets, for example their local MP. You can allow for the message to be editable by the supporter so that they can amend the message they send or add personal comments. There is an account setting to control whether the system stores these messages for your records.

Also, by default, messages are sent immediately from your supporter to the target. If you wish for the supporter to instead confirm first that they wish to send the message, then you can switch on a setting that postpones the send until the supporter has clicked a confirmation link in an auto-generated email.

### Why is this important for GDPR?

The settings you choose will help ensure your supporters' **right to be informed** is adhered to and that you are following the concept of **data protection by design and default**.

## Page design flexibility

The Engaging Networks system is fully flexible; we don't restrict your page design, page function, or page content. Code blocks enable you, or the agencies you work with, to add bespoke Javascript code and Regex validations. This enables form fields to respond quickly to data that is incorrectly entered. Some examples of this that are GDPR-related include:

- only asking for the data you need to ask for - the only required field is email address for any form, and postcode is required when setting up email to target campaigns that need the supporter matched to a local or regional decision-makers
- there is one exception to the point above - it is possible to hide the email address field for anonymous surveys, but still save responses
- displaying a message when a supporter selects "No" for their opt-in status (radio button HTML format) increases opt-in rates (this is available to implement using simple Javascript – ask us for more information)
- adding address-lookup / validation plugins to ensure the data you collect is accurate at the time of collection
- recording the opt-in statement text on submission along with the status.

Email Address

Would you like to receive news about CSW's work and how you can support it?

Yes  No

If you select Yes we will only contact you with updates on our work. **Are you still sure you want to select No?**

Christian Solidarity Worldwide uses a custom alert when a supporter chooses No

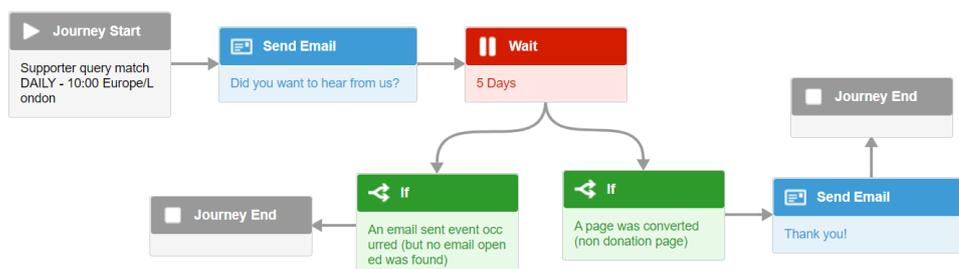

### Why is this important for GDPR?

The settings you choose will help ensure your supporters' **right to be informed** is adhered to and that you are following the concept of **data protection by design and default**.

## Marketing automation

Marketing automation allows you to create a series of dynamic email workflows (workflows change as a supporter engages with the content.) Amongst other things, they can be used together with our email engagement scoring to send emails to supporters that have not responded to your email communication (for example their engagement score suggests they have not opened an email for over a year).

We are extending the functionality of marketing automation this year to automatically send an email to supporters asking them to re-subscribe if they have not responded to any communication for a specified period of time since they last confirmed their opt-in status.

### Why is this important for GDPR?

You may interpret GDPR's consent requirements to mean that you should regularly check-in with your supporters to ensure their Consent is recent and that they are aware they are opted-in to receive your communications.

# The supporter database, exports and imports

## Comprehensive data records

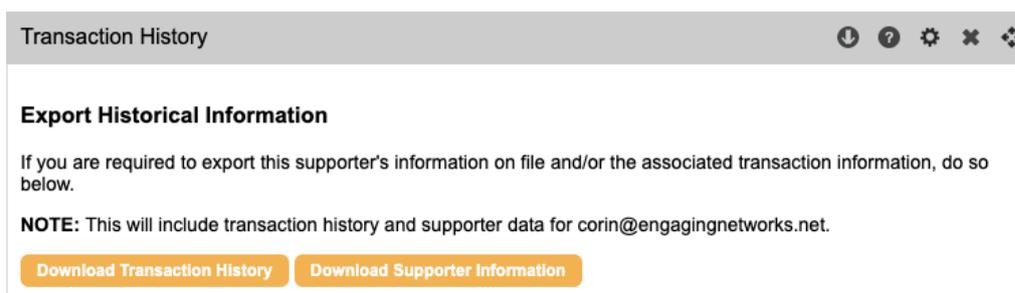

Every supporter has a unique record in Engaging Networks that can be viewed on amended individually or in a batch via import. Data can also be exported in batches directly from the account dashboard.

Every time a supporter submits their data on an Engaging Networks page our software records a transaction. This applies to all activity (e.g. someone completing a form to sign-up for a newsletter, making a donation, or sending an email message to their MP). The data includes the date and time of the transaction, along with the page name, and other information to give you a complete picture of activity.

You can also record an Origin Source which identifies how someone was initially added to the database, or an Appeal Code which identifies the source of the transaction itself. You can also create a series of different links to track different channels, such as email, Google Ads or your website. Of course, Engaging Networks is fully integrated with Google Analytics, so UTM codes, or your own bespoke campaign references, can be recorded too.

## Handling Subject Access Requests

A supporter might request data you hold on them, and it's important to react quickly. We have made this process easy by our Lookup Supporter tool that allows a full transactional download in couple of clicks

## Data deletion

You can delete a supporter and their transactions from your Engaging Networks database by looking up their record in the Supporter Lookup, and clicking the **✗** icon next to their name. As data controllers, you (the client) is responsible for deleting a supporter. Once a supporter is deleted, any personally identifiable details are completely removed.

What remains in the system is log data that is associated with the supporter's numeric ID (which can't be linked back to any further personal details about the supporter). We retain the log data for at least a period of six months so that financial records can be reconciled. After six months, all log data for the removed supporters is then eligible for deletion.

### Why is this important for GDPR?

GDPR gives individuals the right to have personal data rectified if it is inaccurate or incomplete under their **right to rectification**. The **right to be informed** asks that you keep track of "the source the personal data originates from and whether it came from publicly accessible sources".

You can delete a supporter and their associated transaction by searching for and deleting their record, obeying their **right to erasure**.

Exports mean you can pass on any information to your supporter should they request it, obeying their **right to access** and **right to data portability**.

# Security

## Robust architecture

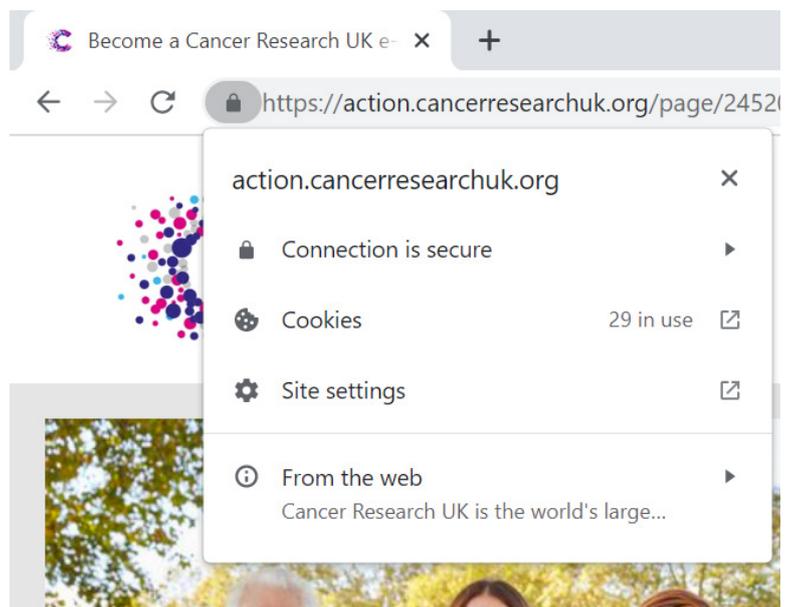

Engaging Networks provides a cloud-based Software as a Service (SaaS) platform to clients. Our platform is hosted using Amazon Web Services (AWS), and all data is encrypted at rest. All client communication is securely transmitted using Secure Socket Layers (SSL) and Transport Layer Security (TLS).

We do not store payment card details in the software and any pushes by the system to trigger a recurring payment are managed via a token. If you need to collect account number or sort code, then you can use our Stripe integration which doesn't store this information, or otherwise we provide an Encrypted Bank Store that can only be accessed by a private token only known to a user in your account that has increased privileges (a SuperAdmin).

Engaging Networks is PCI Compliant (VISA Merchant Level II). In addition, our Managed hosting provider is ISO 27001 certified and also maintains PCI certification (Level I).

Maintaining PCI Compliance requires that Engaging Networks engage in ongoing activities that include, but are not limited to, build and maintain a secure network, protect sensitive data, maintain a vulnerability management programme, implement strong security measures, and regularly test and monitor networks and systems.

Engaging Networks is required to produce an annual Self-Assessment Questionnaire (SAQ D), quarterly network scans, and Certificate of Compliance from our security consultancy.

## Secure access

You have full control over which members of your organisation can access Engaging Networks, and permission groups give you fine-grained permissions so that users can only access certain areas of the software, or see certain supporter data.

We implement onboarding and exit procedures to make certain that you know how to provision the minimum access required for team members to perform their duties. We also review with you the process for terminating access as appropriate as job responsibilities change.

For your Engaging Networks users, we strongly recommend you enable two-factor authentication for increased security. This can be turned on by your SuperAdmin.

### Why is this important for GDPR?

Data protection and security is a key component of GDPR.
